

*Flexible, Expandable and
Affordable
Thin Client Computing*

We've taken our most popular thin client features and built them into the N Lynx MinIT 6700.

The Minit 6700 includes a full suite of connectivity clients, including our award winning ES/TCP emulation software for TN5250e connections to IBM's iSeries AS/400 hosts. The extensive list of emulations also includes TN3270 for Mainframe environments, a long list of VT emulations for Unix shops, and RDP and ICA clients for connections to Windows Servers.

Combining this with the advanced features of the ePro Management Utility creates a device with the performance of a PC plus the manageability of a thin client.

Other Installed applications include Internet Explorer 6.0, viewers for Word, Excel, PowerPoint and Adobe Acrobat Reader.

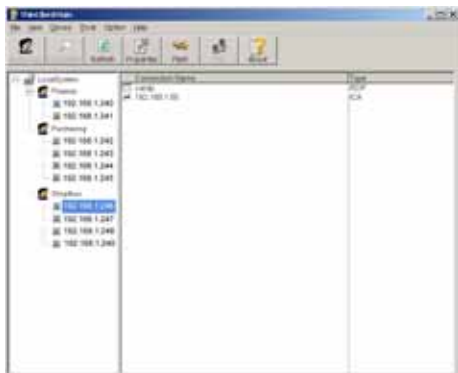

At the same time, the Minit 6700's expandable form factor gives you the extra flexibility that you might need – to add wireless networking through the PCMCIA slot or other specialized hardware compatibility via the standard PCI expansion slot.

- ✓ Take Control – With thin clients (no hard drives, CDs or floppies), you have total control over what applications are used on the desktop.
- ✓ Add Manageability – Use ePro Manager to simplify and centralize the tasks of tracking and controlling your installed base of thin clients.
- ✓ Improve Reliability – The Minit 6700 has a solid-state design, with no moving parts, no hard drive and no fan.
- ✓ Reduce support costs – Our ePro Manager software's remote desktop capabilities allow you to perform maintenance and support tasks remotely.

ePro Manager provides

- Centralized configuration
- Reporting and management of devices by groups
- Firmware upgrades
- Remote control of the desktop
-

Whether you connect to a mainframe, iSeries, pSeries or zSeries host, Windows Server, Unix, Linux, Citrix or the Internet; the MinIT 6700 is designed to maximize IT productivity while minimizing IT costs.

The MinIT family of thin clients includes a variety of models, each designed to address a range of connectivity needs. Visit us on the web at www.nlynx.co.uk for more information.
