

# ETU<sup>®</sup> File Transfer Utility

for the IBM<sup>®</sup>  
System/36 or AS/400

*ETU File Transfer Utility from N Lynx Systems is a software package that provides file transfer between your IBM Midrange Host and your PC or Macintosh<sup>®</sup> computers.*

ETU File Transfer Utility from N Lynx is a fast and easy way to transfer data between an IBM System/36, Advanced Series 36, or AS/400 and DOS, Windows, or Macintosh platforms. Computers can be connected either locally or from remote locations.

**Designed for ease of use.** ETU software runs on the System/36, Advanced Series 36, or AS/400 and interfaces with a DOS, Windows, or Macintosh computer without a virtual disk. An easy-to-use menu allows you to select the transfer or translation operation you want from a list of options. You're prompted through the entire process, while an up-to-the-minute status message keeps you informed of the program's progress.

**Powerful two-way translation.** ETU translates files to and from a number of DOS, Windows, and Macintosh formats, including ASCII Basic, ASCII Tab, ASCII Text, DIF, or MacApp.

**Versatile print file options.** Transfer print files quickly from the PC to the System/36 or AS/400 printer when you need high-speed printing. Print spool files can also be downloaded from the System/36 or AS/400 for off-line printing on a DOS, Windows, or Macintosh computer.

**Unattended operation.** ETU lets you transfer files at the time of day that's convenient for you—even when support personnel aren't available. For automated file transfer, initiate ETU by host procedure or in conjunction with a resident keystroke file.

**Local and remote emulation compatibility.** ETU is compatible with both local and remote emulation products, including ES/3XTwin<sup>®</sup>, ES/TCP<sup>™</sup>, ES/PCI<sup>™</sup>, ES/Remote<sup>™</sup>, TCP/Axcess<sup>®</sup>, and other 5250 local and remote emulators from N Lynx.

## **AS/400 Record and Field transfer.**

Select and transfer only the record that you want, and/or only data within certain fields in a database file that meets your criteria. Also, ETU400 allows you to define the order of the file after it has been transferred from the host to the PC, so you get only the information you need in the order you want.

## **ADDITIONAL FEATURES:**

- Execute ETU with standard System/36 procedure calls and menu-driven commands.
- Integrate ETU functions easily into new or existing user applications through simple programmer interface.
- Power commands for ETU 400 include batch transfers, PC to PC transfers, and date and time scheduling.

# ETU<sup>®</sup> File Transfer Utility

## General

The ETU package includes:

- ETU file transfer software
- ETU User Guide

Part numbers:

ETU 36 diskette - 301-9008-05

ETU 36 (for AS/36) 1/4" cassette - 301-9008-06

ETU 400 (CISC) 1/4" cassette - 301-9075-12

ETU 400 RISC, CD ROM - 301-9075-00

**Warranty:** N Lynx limited one-year warranty for hardware and 90 days for firmware/software. The N Lynx ASSIST<sup>SM</sup> Program is available to provide extended technical support services. Ask for current rates and terms.

**Technical Support:** In the U.S., technical support is available between 7:30 a.m. and 7:00 p.m. (CST), Monday through Friday, toll-free on 1-888-659-6967. For Asia/Pacific, Australia, and Latin America, call (512) 301-8180. For Europe, Africa, and the Middle East, call +44 161 928 7014.

## System Requirements

**Midrange Requirements:**

- System 36: System Support Program (SSP) Rel 5 and above
- AS/400: Operating System/400 (OS/400) Rel 1.3 and above
- Advanced Series 36

**PC Requirements:**

- Emerald Series (or compatible) emulation software

## Related N Lynx Products

**ES/3XTwin:** Powerful seven session hardware/software bundle for PC-to-IBM<sup>®</sup> midrange twinax emulation, supporting all Windows operating systems in a single solution. Includes 16- and 32-bit display and printer emulation for any Windows environment. No IRQ required! Also Available for DOS.

**ES/PCI:** 7 Session PCI Plug and Play Twinax card. Same features as 3XTwin (IRQ and memory are configured automatically).

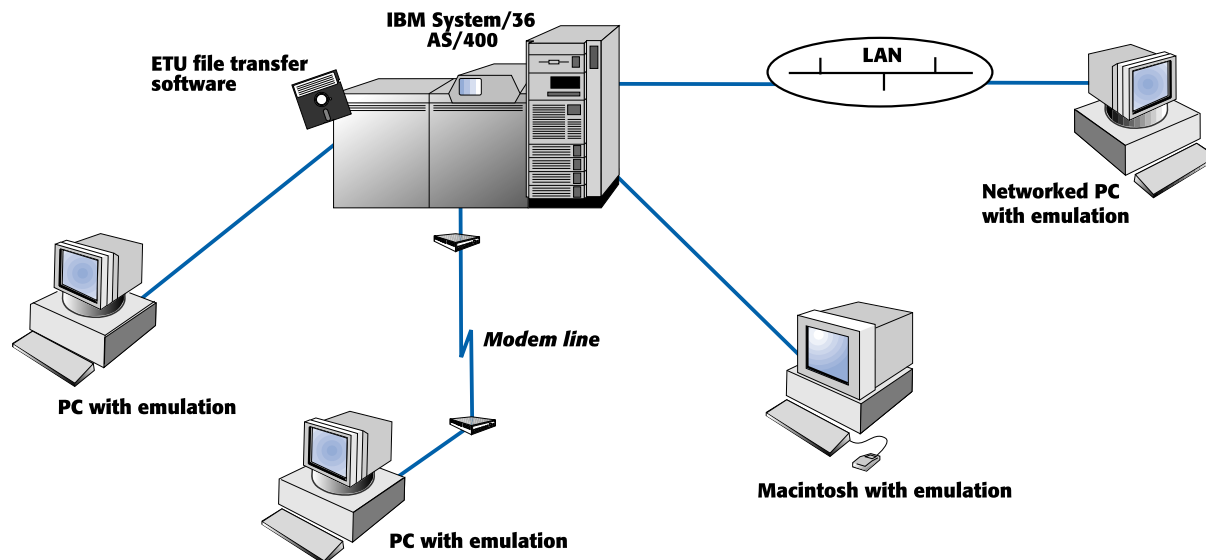

**ES/TCP:** TN5250 display and printer emulation for Windows, Windows for Workgroups, Windows 95, and Windows NT connections to the AS/400.

**ES/Remote:** Software and hardware combination that allows users dial-up remote access to an IBM Midrange System. Also available for Macintosh and DOS users.

**ES/Server<sup>®</sup>:** Low-cost gateway, connecting via Twinax to an IBM Midrange to share seven emulation sessions (per adapter) over an Ethernet or Token Ring LAN.

**TCPAccess<sup>®</sup>:** For Terminal and Printer access from a Mac to an AS/400 through a TCP/IP network.
